Nguyen Trung Kien

Intern

29/06/2003 | 0966313528 | trungkiendev203@gmail.com

Nam | Thanh Xuan, Hanoi | https://www.facebook.com/ngtrungkien205/

CAREER OBJECTIVE

Final-year Information Technology student with a solid foundation in programming and logical thinking. Seeking an internship opportunity in a professional environment to apply academic knowledge to real-world projects, improve programming skills, teamwork, and software development processes.
During the internship, I aim to deepen my knowledge in application development, backend systems, APIs, and databases, and gradually become a professional software developer.

EDUCATION

2022 - 2026 **Thuy Loi University | Information Technology – Software Engineering**

KỸ NĂNG

- **Java / Spring Boot**
  Build RESTful APIs following Controller – Service – Repository architecture, handle business logic and database integration.
- **Linux:**
  Basic command line usage, process management, and server interaction (SSH)
- **Tools:**
  Git/GitHub, Docker, basic CI/CD.
- **PHP / Laravel:**
  Understanding of MVC, implementing CRUD operations, validation, and basic authentication.
- **AI Agents & Automation:**
  -Designed basic multi-agent (sub-agent) workflows for content generation and task orchestration
  -Leveraged LLMs for code generation, debugging, and workflow optimization
- **Database (MySQL):**
  Design tables, relationships, and perform queries (SELECT, INSERT, UPDATE, JOIN).

CERTIFICATIONS

2023 TOEIC 550

PROJECTS

2026 - 2026 **Badminton Matching Website | Backend Developer**
Developed a platform connecting badminton players, allowing users to post and find matches based on location, time, and skill level.
Built REST APIs using Spring Boot for post management, search, and filtering.

Integrated a crawler (Python + Playwright) to collect posts from Facebook and synchronize data via API.
GitHub: https://github.com/trungkiendev203/Tim_Tran_Cau_Long

2026 - 2026

FB Concert Alert Bot | Backend / Automation
Automated system to monitor Facebook pages and send real-time alerts for concert ticket releases.

- Built scraping pipeline using Playwright (headless Chromium) to track new posts
- Implemented near real-time polling with anti-detection techniques (randomized intervals, stealth configs)
- Integrated Telegram Bot API for instant notifications
- Designed keyword-based alert system
- Stored crawl history using SQLite to prevent duplicate alerts

GitHub: https://github.com/trungkiendev203/fb-concert-alert-bot

2026 - 2026

Story Cooker (AI Video/Story Automation Tool) | AI Application Developer / Python Developer
Developed a Python desktop application (CustomTkinter) to automate video creation workflows
Designed a basic multi-agent workflow for content generation and processing
Integrated AI (Gemini/OpenAI, local TTS) for script generation and voice synthesis
Built a multimedia processing pipeline using FFmpeg, OpenCV, PyDub, and yt-dlp.
GitHub: https://github.com/trungkiendev203/STORY-COOKER---AUTO-VIDEO-MAKER

2025 - 2025

E-commerce Website (Laravel) | Web Developer
Built an e-commerce website using Laravel (MVC) with features: user authentication, product browsing, ordering; admin management of categories, products, and orders.
Applied CRUD, validation, authentication, and MySQL database design.
Improved backend development skills and business logic analysis.
GitHub: https://github.com/trungkiendev203/WebBanHang

INTERESTS

- Playing sports (football, badminton) to maintain physical fitness
- Listening to music and watching tech reviews
